

C-GM/3RVM & C-GM/3RVF

VGA (15-Pin HD) to 3 RCA Breakout Cable

Kramer's computer graphics video to component video breakout cables are constructed of 3 mini coax cables with a 15-pin HD (M) connector on one end and 3 RCA (M or F) connectors on the other. These cables can be used when a source or display can be configured to send or receive either computer graphics video or component video signals - for example, Kramer VP-723DS and VP-724DS scalars use this adapter to support their HDTV output modes.

FEATURES

- **High Quality Construction** - Rugged and high resolution 3 mini coax cable with molded connectors.
- **Numerous Applications** - Allow Kramer 15-pin HD distribution amplifiers, switchers and scaler switchers to be used to route component video signals.
- **Varied Selection of Lengths** - Male-male available in 3 and 6ft versions (0.9 and 1.8m). Male-female C-GM/3RVMF-1 is approximately 10in in length (0.25m).
